

One-Page Summary Report — Netflix Dataset Analysis

Cleaning Challenges Encountered

Several data quality issues were identified during the cleaning phase of the Netflix dataset.

1. Missing Values

Some columns such as **director**, **cast**, **country**, and **date_added** contained missing values. These missing entries could affect analysis, especially when exploring content creators and countries. Missing text values were filled with "**Unknown**", while invalid dates were converted to null values for consistency.

2. Inconsistent Date Formatting

The **date_added** column contained date values in string format and some missing records. These were standardized using Python datetime conversion to ensure consistent analysis by year.

3. Text Standardization Issues

Some categorical columns contained extra spaces and inconsistent formatting. Column names were cleaned by converting them to lowercase and replacing spaces with underscores to improve readability and coding efficiency.

4. Mixed Data Types

Columns such as **duration** contained both movie durations (minutes) and TV show durations (seasons), requiring careful interpretation during analysis.

Key EDA Findings

Exploratory Data Analysis revealed several important patterns in the dataset.

- **Movies dominate Netflix content** compared to TV Shows, indicating that Netflix's catalog is more movie-heavy.
 - The number of titles added to Netflix increased significantly between **2016 and 2020**, showing rapid platform growth during this period.
 - The **United States** contributed the highest amount of content, followed by countries such as India and the United Kingdom.
 - The most common content rating was **TV-MA**, suggesting a large portion of Netflix content targets mature audiences.
 - Most content was released in recent years, especially after **2010**, reflecting Netflix's focus on newer productions.
-

Top Insights

1. Netflix Prioritizes Movies

Movies make up the majority of the catalog, showing stronger investment in film distribution than serialized shows.

2. Rapid Expansion Occurred Around 2018–2020

The line chart of content added by year shows a major increase during this period, suggesting aggressive content acquisition and production.

3. Mature Audience Content Dominates

The high frequency of **TV-MA** ratings indicates that Netflix strongly serves adult and mature viewers.

4. Content Production is Concentrated in Few Countries

A large portion of titles comes from a small number of countries, especially the United States.

5. Netflix Focuses More on Modern Content

Most titles were released after 2010, suggesting emphasis on recent and trending entertainment.
